NOAA_subbasins

Data dictionary

This layer was developed by NOAA Fisheries as part of the Chehalis Aquatic Species Restoration Plan planning process to help quantify the habitat capacity for spawning in large rivers. This layer is a modified version of the subbasins used by EDT in October of 2018, in which several spatial units were added to represent reaches of the mainstem. There are 63 NOAA Subbasins in total.

Field Name	Description	Units
sub_name	Subbasin name: there are 63 subbasins.	
sub_num	Subbasin number
