

Large River Spawning Riffles

Data Dictionary

These layers were developed by NOAA Fisheries for input into the Habitat Assessment and Restoration Planning (HARP) Model. In the Stillaguamish Basin potential spawning riffles were digitized using the 2021 National Agricultural Imagery Program (NAIP) aerial imagery. In the Snohomish Basin spawning riffles were digitized in the Snoqualmie and Tolt rivers using Washington Department of Fish and Wildlife and King County redd surveys as a guide (this layer does not cover the entire basin).
