<sup>a</sup>N<sub>EST</sub> is the best estimate of pup and non-pup counts, which have not been corrected to account for animals at sea during abundance surveys.

<sup>b</sup>N<sub>EST</sub>, N<sub>MIN</sub>, and PBR have been calculated for this stock; however, important caveats exist. See Stock Assessment Report text for details.

<sup>c</sup>The Alaska stock of ringed seals was listed as threatened under the Endangered Species Act (ESA) on 28 December 2012. On 11 March 2016, the U.S. District Court for the District of Alaska issued a decision vacating the listing; a notice of appeal of the District Court decision was filed on 3 May 2016; and the listing was reinstated on 15 May 2018. Because the stock was not listed as threatened under the ESA or considered to be strategic under the Marine Mammal Protection Act when the draft 2018 Stock Assessment Reports were prepared, this report was not revised in 2018.

<sup>d</sup>N<sub>EST</sub> is based on counts of individual animals identified from photo-identification catalogues. Surveys for abundance estimates of these stocks are conducted infrequently.
