

Better **Data,** Better **Fishing** You make it possible

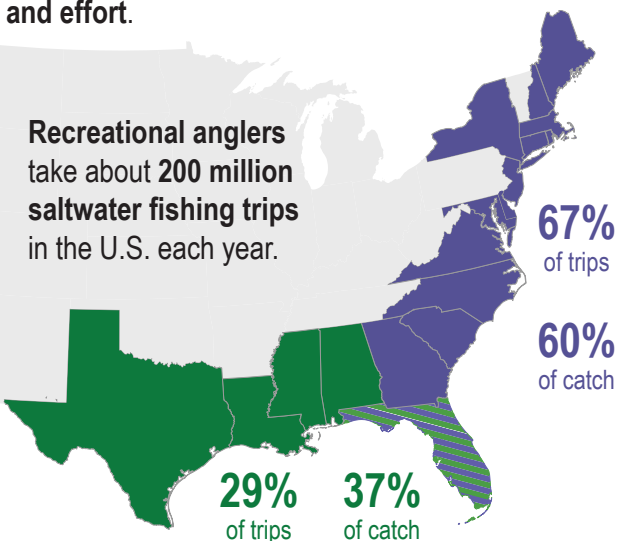

When you **share information** about your saltwater fishing trip, you're playing a **key role** in supporting **healthy and productive fisheries**.

Specially trained field interviewers gather catch information by surveying anglers at the end of their trips. Interviewers play no part in law enforcement, and **all responses are confidential**.

States collect data in support of the **Marine Recreational Information Program**: the state-regional-federal partnership that estimates **saltwater anglers' catch and effort**.

Recreational anglers take about **200 million saltwater fishing trips** in the U.S. each year.

Your **Fishing** **Counts!**

Information you share helps ensure sustainable fisheries today—and for generations to come.

Your **fishing activity** is counted through **surveys** conducted with tens of thousands of recreational anglers.

This is **combined with other data**, such as commercial catch, direct observation, and biological factors like age and growth rates.

Scientists evaluate all of these factors to **determine the health of our fisheries**.

Managers work with anglers and other involved community members to **set rules that help keep stocks sustainable**.

The cycle continues as we **assess and respond to the ongoing health and productivity** of our fisheries.
