

## Atlantic cod – Georges Bank

The status of Georges Bank cod is based on the results of the stock assessment completed in 2013. The stock assessment conducted in 2015 was rejected. Assessments conducted in 2017 and 2019 were not used to support overfishing or overfished stock status determinations.

# Atlantic Cod – Gulf of Maine

## Blue Marlin - Atlantic

# Dusky shark – Atlantic and Gulf of Mexico

# Gray triggerfish – Gulf of Mexico

Overfishing status for 2018 is based on catch/overfishing limit (OFL). Previous years on this plot show fishing mortality rate (F) compared to FMSY from the most recent stock assessment.

# Red grouper – Southern Atlantic Coast

# Yellowtail flounder – Georges Bank

The 2012 estimate of fishing mortality ( $F/F_{MSY}=3.12$ ) was adjusted using Mohn's rho, to account for the retrospective pattern of underestimating fishing mortality; this adjustment was judged to be the best measure of fishing mortality and is the ratio reported in support of stock status (is a more conservative estimate). The 2017 stock assessment was not accepted so the results from the 2013 stock assessment are presented here (the 2013 assessment supports the status of this stock)
